

HAMZA BUKHARI

hamzabukhari.build@gmail.com | +92 328 1622225 | Lahore, Pakistan

GitHub: github.com/fakexezo-lgtm

Objective

Data Science undergraduate and aspiring full-stack developer looking for a **software engineering / web development / AI internship** where I can contribute to real projects, learn from experienced engineers, and strengthen my fundamentals. I enjoy building end-to-end products and am comfortable picking up new tools quickly.

Education

BS Data Science University of Central Punjab (UCP), Lahore
Expected Graduation: 2026

Technical Skills

Skill Area	Technologies
Frontend	React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, shadcn/ui
Backend & Database	Node.js, Express, Python (FastAPI basics), Electron, REST APIs, PostgreSQL, Supabase, JWT Authentication
AI / LLM Tools	LLM API Integration (Groq, Gemini, Ollama), Prompt Engineering, Vector Search (FAISS, LanceDB), LangChain (basics)
Tools & Workflow	Git & GitHub, Vercel, Postman, VS Code, AI-assisted development (Cursor, Claude)
Currently Learning	Data Structures & Algorithms, deeper JavaScript/Python fundamentals, system design basics

Projects

ZEZO (Neural OS Foundation)

Electron, React, Node.js, Google Gemini, LanceDB | <https://github.com/fakexezo-lgtm/zezo>

- Developed a local-first "Neural OS" that lets me control my computer and files using natural language commands.

- Used Electron to bridge the AI with my OS, enabling tasks like opening apps, managing files, and automating browser workflows.
- Implemented long-term memory using vector search (LanceDB), allowing the AI to recall past tasks and project context.
- Built a mobile integration layer to interact with Android devices directly from my desktop interface.

Penvox AI Engine (Content Generation Platform)

Next.js, Supabase, Serverless Functions, LLM APIs | <https://github.com/fakexezo-lgtm/penvox>

- Built a tool that takes a YouTube video and generates ready-to-post content for multiple social media platforms.
- Created a pipeline using serverless functions to fetch video data and process it through an LLM.
- Set up user authentication and Supabase Row Level Security so each user can only access their own data.
- Integrated a subscription flow with a payment gateway to make it a working paid product.

Refract CRM (Customer Relationship Management App)

Next.js, PostgreSQL, Prisma, Tailwind CSS | <https://github.com/fakexezo-lgtm/Refract>

- Designed and deployed a CRM from scratch database schema, backend APIs, frontend dashboard, and hosting.
- Modeled customer, team, and organization relationships in PostgreSQL.
- Built role-based access so team members and admins see different permissions.
- Improved dashboard responsiveness by optimizing API routes and database queries.

What I Bring as an Intern

Shipping mindset: Three deployed, working projects built end-to-end comfortable going from idea to a live URL.

Fast learner: I use modern AI tools (Cursor, Claude) to move quickly, and I actively read docs and code to understand what I'm building.

Honest about my level: I'm still building depth in core CS fundamentals and am eager to be mentored, review code, and improve as an engineer.

Team-ready: Comfortable with Git workflows, code reviews, and picking up an existing codebase.
